ABSTRACTED-PUB-NO: SU 1061818A

BASIC-ABSTRACT:

4-5 injections of placenta suspension are administered at 5-7 day intervals.

The duration of therapy is reduced by 2-2.5 fold (viz. from 6-8 weeks using Dekaris to 3-5 weeks using placenta).

In an example, a longterm patient was given 4 injections at 5 day intervals.

The course increased the indicator of spontaneous  
rosella-formation of  
enurophils from 554 to 1173 (the norm is 1112 +- 101 per 1 ml  
of blood).

A stable remission was obtd. which lasted 6 months.

Immunological properties of the blood were normalised.

Bul.47/23.12.83.
